

OCI SOFTWARE COMES TO THE RESCUE WITH SPECIAL PRICING ON AMBUPRO EMS SOFTWARE

- In Financially Tough Times EMS Departments Can Now Purchase Fully- Functional AmbuPro EMS Software Intro Packages For as Low as \$1,995 -

Fall River, MA, DATE – OCI Software, developer of AmbuPro EMS ePCR software for use by EMS professionals, has announced immediate availability of two special software pricing programs under \$3,000. **Office One** and **Mobile One Starter Solutions** provide fully functional AmbuPro EMS ePCR software for a fraction of its full Enterprise Solution price, allowing users to test run the software and establish a platform to expand upon.

The AmbuPro EMS Office One Starter solution version costs only \$1,995 and provides for a single workstation connection. The AmbuPro EMS Mobile One costs only \$2,995 and provides for a single ambulance service connection. Both versions provide full version-full feature functionality identical to OCI Software's AmbuPro EMS Enterprise Solution product.

Why deeply discounted Office One and Mobile One? In these challenging financial times, cities and towns are being constrained when it comes to new spending for large ticket capital expenditures. EMS departments that see the critical need for having an advanced software-hardware solution for incident management and reporting may not be in a position to obtain funding from cash-strapped city and county governments. By offering Office One and Mobile One at less than \$3,000 each, OCI Software is responding to this situation and allowing municipalities to obtain the software and put it to work.

“Office One and Mobile One are cost-effective ways to obtain and employ our software,” explains Doug Furtado, OCI Software's Vice President and Chief Technology Officer. “We realize that a single connection, be it workstation or mobile, may not fully meet a customer's optimal needs but this is a way to start small at a most affordable buy-in. As times get better and funding constraints loosen up, those customers who have taken advantage of this offer will be in a better position to make the case for a full solution. They will have used the program and realized its tremendous benefits.”

AmbuPro EMS, developed for the EMS community by EMS professionals, is an advanced yet easy-to-use software and hardware solution for incident management and reporting. AmbuPro EMS instantly places vital patient information and incident history at the fingertips of fast-acting EMS personnel, supplying them with critical information for better decision making. The software improves compliance with regional and state requirements while streamlining claims and billing.

Customers of AmbuPro EMS are supplied with all the required hardware and software including complete installation, configuration and training. AmbuPro EMS software is NEMESIS Gold Compliant, having been tested through the NEMESIS Technical Assistance Center.
