

## **AMBUPRO EMS EPCR AND ARMS COMPUTER AIDED DISPATCH SOFTWARE TEAM UP TO PROVIDE FIRST RESPONDERS WITH INTEGRATED 911 INFORMATION**

Fall River, MA, 10.12.2009 – OCI Software, developer of AmbuPro EMS ePCR software for use by EMS professionals, has partnered with End2End Public Safety's ARMS Computer Aided Dispatch (CAD) to provide total integration of 911 incident information and vital alerts. Technical integration of data sharing between the two software programs will provide EMS and other public safety professionals with a stream of information in real-time, improving critical decision-making.

ARMS Computer Aided Dispatch captures essential initial information from 911 and other emergency calls. The software manages resources, responses and all dispatching activities for police, fire and EMS personnel. AmbuPro EMS software is an advanced yet easy-to-use software-hardware solution for incident management and reporting. AmbuPro EMS instantly places vital patient and incident information at the fingertips of fast-moving EMS teams.

"Partnering with OCI Software will allow us together to build enterprise solutions for our customers," said Michael Bryant, End2End's Vice President. "This will be of consequential benefit to them."

"We are excited about the CAD integration of AmbuPro EMS with ARMS," said Doug Furtado, Vice President & CTO of OCI Software. "Strategic partnerships with other industry-leading technology firms is essential to the success of AmbuPro EMS. The relationship between OCI Software and End2End empowers our mutual customers to leverage from a powerful and complete public safety solution."

One mutual customer is the Billerica, MA Police Department. Sergeant Greg Katz, Technical Services Officer for the department has this to say about the integration of AmbuPro EMS and ARMS CAD:

"Public safety software is no longer the single vendor solution it once was. In our case, it became evident that most of the police-focused software would not handle EMS at a level we needed. OCI Software was the vendor of choice for us. Their EMS software, AmbuPro EMS, gave us the patient privacy compliance we needed. In addition, we needed a vendor that was open to data sharing with our CAD vendor, End2End Public Safety systems. Both companies were able to perform their data sharing components in short order and the CAD integration was up and running in just a few days. The ability to share data between systems is essential and it allows us to avoid unnecessary training and redundant data entry for the end-user."

OCI Software is a premier software design and development firm located in Fall River, MA. The company, which serves small businesses to Fortune 500 corporations, has been in business since 1981. AmbuPro EMS, now in its 10<sup>th</sup> version, has matured to become OCI Software's flagship product. [www.ambupro.net](http://www.ambupro.net).

Founded in 1988, End2End Public Safety focuses on applications geared specifically to small and midsize public safety agencies. Its ARMS (Advanced Records Management System), written in Microsoft .NET and utilizing Microsoft® SQL Server, is a complete records management solution for use by public safety departments. Its ARMS Computer Aided Dispatch is used by public safety agencies across America. [www.arms.com](http://www.arms.com).
