

OCI SOFTWARE ISSUES VERSION 11 OF AMBUPRO EMS ® EPCR SOFTWARE

- New Version Contains Powerful, Next Generation Advancements -

Fall River, MA, July 27, 2010 – OCI Software, developer of AmbuPro EMS ® ePCR software for use by EMS professionals, has announced the release of Version 11, a powerful, next generation advancement of the ePCR software platform used by emergency response and public safety officials across the U.S. Version 11 allows AmbuPro EMS customers to more effectively search, organize and protect patient data, all at their fingertips.

Version 11 provides even more operational and administrative benefits, plus advanced search and reporting features that have been leveraged out of intense research and new, advanced development technologies. These new features include:

- **Extensive Dashboard Reports:** Over 100 pre-built reports and advanced custom reports shipped standard with Version 11 empowers EMS administrators to have enhanced control over their data. Users can zoom in to pertinent reports and records.
- **FlexMap PowerView:** This powerful tool provides multi-incident density mapping, allowing users to understand the density of call volume in a particular geographic locale.
- **IntelliForms:** Allows customers to generate their own custom HTML forms, then load them into AmbuPro EMS as an IntelliForm, map data bindings and synchronize into the field/office. When the user loads the specific IntelliForm, AmbuPro EMS will pre-populate specific data elements into the form. Custom-developed IntelliForms can also be created by OCI Software working directly with the customer.
- **Custom Summary Searching:** Version 11 provides new customizable summary criteria fields with topic-sensitive complement fields, making search possibilities limitless.
- **Philips Interface Bridge:** Version 11 ships with the Philips Interface Bridge which is a Wizard-style interface to import cases, vital signs and mapped procedures from Philips MRx cardiac monitors. It can also auto-attach complete case files to current Incident and Patient records for future comparison.

Prior to all commercial releases, OCI Software conducts extensive alpha and beta testing of the software, according to Doug Furtado, the company's Vice President & Chief Technology Officer. "Version 11 contains a wealth of software additions, each designed to improve the end-user application experience. Version 11 is quite simply our finest AmbuPro EMS ePCR software release to date."

Interested parties can watch a short "What's New in Version 11" video at the AmbuPro EMS website: <http://www.AmbuPro.net>.
